## All we need to generate your personalised quote is:

- Full Business name and address, including its postcode.
- Your half-hourly electric usage data (we will need a signed Letter of Authority to retrieve this).
- The last 12 months' worth or latest electricity bills for the premises with your current tariff rate (pence per kWh).
- An aerial view of the roof space or land where you wish the solar to be installed (can be obtained from Google).
- How many electric meters are found on site?
- Is it located in a conservation area or is it a listed building?
- What type of material is your roof is made from and is there is any asbestos?

---

## The Process:

### Consultation and Viability Assessment

We provide thorough consultation and viability assessments to ensure the solar array solution aligns with your energy needs and financial objectives.

### Design and Planning

Our team offers expert design and planning services, customizing solar arrays to maximize efficiency and performance.

### Procurement and Installation

From procurement of high-quality equipment to seamless installation, we manage the entire process, ensuring a hassle-free experience for our clients.

### DNO (Distribution Network Operator) Applications

We handle all aspects of DNO applications, streamlining the process and ensuring compliance with regulations for a smooth grid connection.

---

Partner with us for a comprehensive and tax-efficient solar solution, backed by expert services that cover every aspect of the solar array implementation journey.
